

FOLIAR FERTILIZERS

AZOGREEN

FOLIAR CE FERTILIZER Urea

COMPOSITION

TOTAL AVAILABLE UREIC NITROGEN (N): 46% obtained from purified technical Urea with Biuret content below 0,2%.

FEATURES

AZOGREEN is a foliar fertilizer based on nitrogen coming from technical and purified urea and worked in order to obtain a biuret content below the toxicity thresholds of the common agricultural ureas. It can therefore be applied on all plants without fearing any dangers from the toxic element: the biuret. It is particularly suitable at early growing season when the nitrogen requirement is higher.

AZOGREEN is specifically used on winter or spring crops or, anyway, where low temperatures reduce the absorption of the root system.

DOSES AND USE PATTERNS

FOLIAR TREATMENTS:

Fruit picking and viticulture: 4 kg per hectare in spring time until the fruit become nut fruit; after reduce the dose at 2,5-3 Kg per hectare

Horticulture: 1-1,5 kg per hectare

Extensive farming: maize, sunflower: 2-2,5 kg per hectare, sugar beet, soya: 2 kg per hectare.

PACKING: 2,5 ALUMINIUM BAGS-BOXES OF 8 PIECES, 10 AND 20 KG PLASTIC BAGS.
