FEATURES

BIOSTIMPLEX is particularly suitable to all crops that are increasing and which need a contribution of nutrients during specific vegetative phases. Its use is recommended to increase the cell multiplication, the formation of biomass, the size and the quality of the fruits and to optimize the yield of cereals and forage crops.

Used in horticulture it allows to have a homogeneous fruit-laden, even in repeated collections. It helps the plants to live better after weather disasters as hailstorms, frosts and root asphyxia.
